DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 20 June 2005 has been entered.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 20 June 2005 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., In re Berg, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Ornum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Art Unit: 1634

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims19-22, 26, 33-35 and 39-45 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 10 of U.S. Patent No. 7,014,992 in view of Okano et al (U.S. Patent No. 5,434,049. Although the conflicting claims are not identical, they are not patentably distinct from each other because both patent claim and the instant claims are drawn to electrode immobilized nucleic acids wherein the nucleic acids are immobilized covalently via an insulator. The claims merely differ in that the instant claims are drawn to two electrodes. However, multiple electrode substrates for nucleic acid immobilization was well known in the art at the time the claimed invention was made as taught by Okano et al who teach that multiple electrodes provide for simultaneous detection of a plurality of nucleotide targets (Abstract and Column 2, lines 35-57). It would have been obvious to one of ordinary skill in the art at the time the claimed invention was made to modify the '049 electrode by using additional electrodes as taught by Okano et al. One of ordinary skill in the art would have been motivated to do so for the expected benefit of for detecting of a plurality of nucleotide targets simultaneously as taught by Okano et al (Abstract and Column 2, lines 35-57).

5. Claims 19-22, 26, 33-35 and 39-45 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 22, 26-27, 30-35, 37-45 of copending Application No. 09/452,277 in view of Okano et al. (U.S. Patent No. 5,434,049. Although the conflicting claims are not identical, they are not patentably distinct from each other because both sets of claims are drawn to electrode immobilized nucleic acids wherein the nucleic acids are immobilized covalently via an insulator. The claim sets merely

differ in the arrangement of limitations within the claim sets and further in that the instant claims are drawn to two electrodes. However, multiple electrode substrates for nucleic acid immobilization was well known in the art at the time the claimed invention was made as taught by Okano et al who teach that multiple electrodes provide for simultaneous detection of a plurality of nucleotide targets (Abstract and Column 2, lines 35-57). It would have been obvious to one of ordinary skill in the art at the time the claimed invention was made to modify the '277 electrode by using additional electrodes as taught by Okano et al. One of ordinary skill in the art would have been motivated to do so for the expected benefit of for detecting of a plurality of nucleotide targets simultaneously as taught by Okano et al (Abstract and Column 2, lines 35-57).

Page 4

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

No claim is allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to BJ Forman whose telephone number is (571) 272-0741. The examiner can normally be reached on 6:00 TO 3:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ram Shukla can be reached on (571) 272-0735. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
